

Robotics Process Automation

A software solution that enables your employees to focus on tasks only humans can complete

Improved Efficiency and Productivity

Reduce processing time upto 40%

Cost Reduction

Decrease overheads and fixed cost (40+%)

Error Reduction

Reduce chances of non-compliance

Scalability

No coding required

Easy to use

Overview

XBP Europe's EON is robotic process automation as a service, which creates a virtual workforce that operates alongside humans to automate structured and repetitive computer-based tasks.

Key Features

Virtual Workforce

Create task-specific bots that mimic human behaviour and learn best practices.

Remote Management

EON is web-hosted, which enables users to remotely monitor and control bots from anywhere with an internet connection.

Integrable System

EON can be integrated with numerous XBP Europe solutions, as well as third-party systems and applications with ease.

24/7 Solution

EON represents an automated solution that will continue to function 24/7/365 and pause only for system adjustments and exception handling.

Highly Scalable

Whatever the business needs, EON can address it using a team of bots capable of handling multiple processes effectively and accurately.

Visibility & Control

Every operation taken by EON's bots is entirely trackable, auditable, and adjustable, which provides improved visibility and control over key business operations.

About

XBP Europe offers innovative solutions for customers to streamline complex bills and payments processes. We help enterprises, SMBs and public sector organisations globally to rethink transactions, digitisation, operations, communications and remote working. Get in touch today.
